Clone distribution: MGC clone distribution information can be found through the I.M.A.G.E. Consortium/LLNL at: http://image.llnl.gov Series: IRAK Plate: 7 Row: e Column: 5 This clone was selected for full length sequencing because it passed the following selection criteria: Hexamer frequency ORF
Tissue Procurement: Lothar Hennighausen Ph.D., Robin Humphreys cDNA Library Preparation: Life Technologies, Inc.
CDNA Library Arrayed by: The I.M.A.G.E. Consortium (LLNL)
DNA Sequencing by: Sequencing Group at the Stanford Human Genome Center, Stanford University School of Medicine, Stanford, CA 94305

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                * NOTE: This record contains 94 individual

* sequencing reads that have not been assembled into
contigs. Runs of N are used to separate the reads
and the order in which they appear is completely
arbitrary. Low-pass sequence sampling is useful for
identifying clones that may be gene-rich and allows
overlap relationships among clones to be deduced.
However, it should not be assumed that this clone
will be sequenced to completion. In the event that
the record is updated, the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  100 bp

                                                                                                                                                                                                                                                                                                                                                                                                                                                                               * NOTE: This record contains 94 individual

* sequencing reads that have not been assembled into
contigs. Runs of N are used to separate the reads
* and the order in which they appear is completely
* arbitrary. Low pass sequence sampling is useful for
* identifying clones that may be gene-rich and allows
* overlap relationships among clones to be deduced.
* However, it should not be assumed that this clone
* Will be sequenced to completion. In the event that

the record is updated, the accession number will
                                                                                                                                                                                                                                                                                                                                             Center code: WIBR

                                                                                                                                                                                                                                                                                                                    AAD05300-AAD05379 represent cDNAs corresponding to 28 human secreted protein genes, and AAE01456-AAE01513 represent the proteins they encode. protein genes, and AAE01544 represent human secreted protein for preventing, the grade and their secreted proteins are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene treating or ameliorating medical conditions, e.g., by protein or gene creating or ameliorating medical conditions, e.g., by protein or gene creating or ameliorating medical conditions can be diagnosed by determining the mown protein in a sample or by determining the presence of amount of the new genes. Specific uses are described for each of the mutations in the new genes in which they are most highly expressed, and include developing products for the diagnosis or treatment of proliferative disorders, cancer, tumours, foetal and developmental conditions and include developing products for the diagnosis or treatment of proliferative disorders, diseases of the immune system, allergies, neurological disorders, diseases of the immune system, allergies, neurological disorders (e.g., Alzheimer's diseases).

Callorinestinal disorders, pregnancy-related disorders, and infections. The proference and also be used to aid wound disorders, and infections. The profileration, for supporting celluring and epithelial cell proliferation, for supporting culture of primary tissues, to regenerate tissues, to identify their culture of primary tissues, to regenerate tissues, to identify their contract of primary tissues, to regenerate tissues, to identify their contracting symptoms associated with the disorders mentioned above, and immunosorbent assay (ELISA). The present sequence represents a human corrected protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Dp
                           ANDUSION-AADDS379 represent CDNAS corresponding to 28 human secreted protein genes, and AAE01436-AAE01513 represent the proteins they encode. AAE01514-AAE01544 represent human secreted protein fragments or variants. The genes and their secreted proteins are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. Pathological conditions can be diagnosed by determining the amount of the new protein in a sample or by determining the presence of amount of the new protein in a sample or by determining the presence of and include developing products for the diagnosis or treatment of proliferative disorders, cancer, tumours, foetal and developmental and caveloping products for the diagnosis or treatment of proliferative disorders, cancer, tumours, foetal and developmental abnormalities, haematopoietic disorders, diseases of the immune system, ALDS, autoimmune diseases (e.g., rheumatoid arthritis), inflammation, ALDS, autoimmune diseases (e.g., rheumatoid arthritis), inflammation, ALDS, autoimmune diseases, (e.g., rheumatoid arthritis), inflammation, ALDS, autoimmune diseases, or proteins (e.g., Alzheimer's disease, cardiovascular disorders, and infections. The proteins can also be used to aid wound disorders, and infections. The proteins can also be used to aid wound the aliands or binding partners, and in chemicals, and infections bending and epithelial cell proliferation, for prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting conturne of primary tissues, to regenerate tissues, to identify their cognate ligands or binding partners, and in chemicals, and anditive or preservative to modify storage properties.

Antibodies specific for a protein of the invention can be used in allewiating symptoms associated with the disorders mentioned above, and immunosorbent assay (ELISA). The present sequence represents a human ever a human ever a human ever a protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö

Nucleic acids encoding TANGO polypeptides are useful as modulating agents for regulating cellular processes like asthma, graft versus-host diseases, rheumatoid arthritis, psoriasis, inflammatory bowel disease, septic shock, ulcerative colitis, Crohn's disease, chronic myelogenous leukemia, cancer, liver disease, Hodgkin's chronic myelogenous leukemia, cancer, liver disease, Hodgkin's chronic myelogenous leukemia, cancer, liver disease, Hodgkin's cliseases e.g. myasthemia gravis, autoimmune diabetes and autoimmune diseases e.g. myasthemia gravis, autoimmune diabetes and systemic lupus erythematosus. The nucleic acids are also useful for producing transgenic animals and the TANGO polypeptides themselves. Partial TANGO-128, 140, 197, 212, 213, 224, 239 sequences are useful in forensic biology, for diagnostic assays, prognostic assays, pharmacogenomics and for monitoring clinical trials. TANGO polypeptides are suitable for both prophylactic and therapeutic methods for treating a subject at risk of a disorder or having a disorder associated with aberrant TANGO expression. A wide range
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel nucleic acid sequences encoding TANGO-128, 140, 197, 212, 213, 224 and 239 polypeptides useful for the treatment of asthma, rheumatoid arthritis, psoriasis and autoimmune diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              HEGFERASEOIYYENROGYRTASVIIALTDGELHEDLFFYSEREANRSRDLGAIVYCVGV 180

                                                                                                                                                                                                                                                                    δ
                                                                                                                                                                                                                                                                                                              Ω
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful immunosuppressant and cytostatic activity. The polynucleotide of polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system, such as peripheral nervous injuries, peripheral nervopathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, activity, democtactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening,

The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligouncleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to the polynucleotide which comprises a 3'-end sequence of complementary to a polynucleotide which comprises a 3'-end sequence of complementary to a polynucleotide which comprises a 3'-end sequence, where the oligonucleotide comprises at least 15 nucleotides and the combination of the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the edetection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers are also useful for the full-length cDNAs are primers also well and the sexiple of the full-length cDNAs asaily without any specialised methods. AAH13628 and AAH13633 to AAH13632 to AAH13632 to AAH13632 to represent human amino acid sequences; and AAH13632 to AAH13632 to represent chuman amino acid sequences; and AAH13632 to AAH13632 to represent plugonucleotides, all of which are used in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            the present invention.

AAB18455-57 represent human TANGO 216 proteins. The specification also describes TANGO 266, TANGO 261, TANGO 262, and TANGO 267. The TANGO cecilular be used to used to omodulate cellular specification, modulate cellular adhesion. The polypeptides can be used to orreat any von Willebrand factor-associated disorder, regulate extracellular matrix structuring, cellular adhesion, and cell trafficking and/or migration, modulate cellular interactions, modulate cell adhesion in proliferative disorders, such as cancer, that appear in the bone marrow, and leukocytes, treat bone marrow, blood and hematopoietic associated diseases and disorders, atelectasis, understand the bronchiets associated diseases and disorders, spleen associated associated diseases and disorders, spleen associated as schma and bronchiectasis, intestinal disorders, spleen associated as ischemic heart disease, modulate the proliferation, differentiation, and/or function of bone and cartilage cells and to treat bone and/or cartilage associated diseases or disorder. They may also be used to treat disorders associated with the ovaries, and cerebral cartilade and viral meningitis, Alzheimer's Disease, inflammations, hydrocephalus and encephalitis, and treat hepatic disease, multiple sclerosis, brain cancers, hydrocephalus and encephalitis, and treat hepatic disease, multiple sclerosis, brain cancers, context hepatic disease, multiple sclerosis, brain cancers, hydrocephalus and encephalitis, and treat hepatic disease, multiple sclerosis, brain cancers, context hepatic disease, multiple specification; it was context and context hepatic disease, multiple specification; it was context and cancer and cancer and cancer and cancer and cancer and cancer and cancer and cancer and cancer and cancer and cancer and cancer and cancer and cancer and cancer and cancer and cancer and cancer and

                                                                                                                                                                                                                                                                                                                                                                                                             ò
The present sequence represents a human TANGO 216 polypeptide. The specification also describes TANGO 266, TANGO 261, TANGO 262, and TANGO 267..The TANGO polypeptides can be used to modulate cellular proliferation, modulate cellular differentiation and/or modulate cellular allest to treat any von Willebrand
                                                                                                                                                                               equilibries and proliferation; cellular differentiation; cellular adhesion; von Willebrand factor-associated disorder; cell trafficking; cancer; hematopoietic associated disease; atelectrasis; pulmonary congestion; hematopoietic associated disease; atelectrasis; pulmonary congestion; intestinal disorder; spleen associated disease; renal disorder; spleen associated disease; renal disorder; cardiovascular disorder; ischemic heart disease; hydrocephalus; harin herniation; latrogenic disease; inflammation; meningitis; Alzheimer's Disease; cerebral toxoplasmosis; Parkinson's disease; multiple sclerosis; hydrocephalus; encephalitis; hepatic disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel human and murine secreted proteins designated TANGO 216, 261, 265, 266 and 267 useful as modulating agents of cellular processes, e.g. for treating cancer -
                                                                                                                                                                                                                                                                                                                                                                                 /note= "mature process" /note= "you Willebrand factor A domain" /note= "you Willebrand factor A domain"

AAB18455-57 represent human TANGO 216 proteins. The specification also describes TANGO 266, TANGO 261, TANGO 262, and TANGO 267. The TANGO 260 clubar differation, modulate cellular proliferation, modulate cellular adhesion. The proteins can be used to creat any von Willebrand factor-associated disorder, regulate extracellular matrix structuring, cellular adhesion, and cell trafficking and/or migration, modulate cellular interactions, modulate cell adhesion in proliferative disorders, such as cancer, and late appear in the bone matrow, and leukocytes, treat bone marrow, blood and hematopoietic associated diseases and disorders, splean arsociated stream or operation or oedema, emphysema, chronic bronchitis, bronchial stream and bronchiectasis, intestinal disorders, splean associated diseases, modulate trenal disorders, splean associated diseases, modulate the proliferation, differentiation, as ischemic heart disease, modulate the proliferation of bone and cartilage cells and to treat bone and/or cartilage associated diseases or disorder. They may also be used to treat disorders associated with the ovaries, and cerebral oedema, hydrocephalus, brain herniations, iatrogenic disease, inflammations, brain cancers, hydrocephalus and encephalitis, and treat hepatic disorders. The patch cancers, created chashed associated does not appear in the specification; it was created with the version of the patch of the core of the core of the core of the core of the present sequence does not appear in the specification; it was created with the version of the core of the core of the core of the core of the core of the core of the core of the core of the core of the core of the core of the core of the core of the core of the core of the core of the core of the core of the core of the core of the core of the core of the core of the core of the core of the core of the core of the core of the core of the core of the core of the core of the core of the core of the core of the core of the core of the core of the core of the core of the 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ä

TANGO 266; TANGO 216;; TANGO 261; TANGO 267; cellular proliferation; cellular differentiation; cellular adhesion; cellular proliferation; cellular differentiation; cellular adhesion; concer; hematopoietic associated disease; atelectasis; pulmonary congestion; oedema; emphysema; chronic bronchitis; bronchial asthma; bronchiectasis; intestinal disorder; spleen associated disease; renal disorder; cardiovascular disorder; ischemic heart disease; hydrocephalus; brain herniation; latrogenic disease; inflammation; meningitis; Alzhelmer's Disease; cerebral toxoplasmosis; Parkinson's disease; multiple sclerosis; hydrocephalus; encephalitis; hepatic disorder.

A human TANGO 216 polypeptide clone.

(first entry)

15-JAN-2001

AAB18457;

AAB18457 standard; Protein; 488 AA

AAB18457

```
AAB18455-57 represent human TANGO 216 proteins. The specification also describes TANGO 266, TANGO 262, and TANGO 267. The TANGO 260 cescribes TANGO 266, TANGO 261, TANGO 262, and TANGO 267. The TANGO polypeptides can be used to modulate cellular adhesion. The proteins can be used to treat any von Willebrand factor-associated disorder, regulate extracellular matrix structuring, cellular adhesion, and cell trafficking and/or migration, modulate cellular interactions, modulate cell adhesion in proliferative disorders, such as cancer, and learn to the bone marrow, and leukocytes, treat bone marrow, and leukocytes, treat bone marrow, and leukocytes, treat bone marrow, and nematopoietic associated diseases and disorders, atelectasis, bulmonary congestion or oedema, emphysema, chronic bronchitis, bronchial astochemic heart disease, modulate the proliferation, differentiation, as ischemic heart disease, modulate the proliferation, differentiation, and/or function of bone and cartilage cells and to treat bone and/or cartilage associated diseases or disorder. They may also be used to treat disorders associated with the ovaries, and cerebral oedema, hydrocephalus, brain herniations, iatrogenic disease, inflammations,

The invention relates to isolated nucleic acid molecules encoding novel human secreted extracellular matrix proteins (5Ps). The novel human secreted extracellular matrix proteins (5Ps). The polynucleotides and proteins are used to prevent, treat a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. For example, disorders associated with decreased expression of SPs. The SP polynucleotide or a vector expressing them may be administered to dreat diseases by gene therapy. Antisense molecules may be administered to down regulate expression of SPs by binding with the cells own genes and preventing their expression. The polynucleotides may also be used as DNA probes in diagnostic assays. The SPs may also be used to down regulate expression and activity of antagonists may also be used to down regulate expression and activity of antagonists may also be used to down regulate expression and activity of antagonists may also be used to down regulate expression and activity of SP and as diagnostic agents for detecting the presence of SPs in samples. The disorders include for example: immune/diseases (e.g. HIV (human immunodeficiency virus) infections, anaemia, rheumatoid arthritis and multiple sclerosis, cancers and hyperproliferative disorders (e.g. fur melanomas, neoplasms of the breast or liver, Sezary syndrome and caucher's disease), neurological diseases (e.g. Alzheimer's disease, Parkinson's disease) cardio-/cerebrovascular disorders (e.g. cardiac arrest, tachycardia and angina), infections caused by bacteria, viruses and fungi and ocular disorders (e.g. corneal infections). Other uses include wound healing, maintenance of organs before transplantation,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ä

The specification also describes TANGO 266, TANGO 261, TANGO 262, and TANGO 267. The TANGO 260 collular proliferation, modulate polypeptides can be used to modulate cellular adhesion. The cellular differentiation and/or modulate cellular adhesion. The proteins can be used to treat any von Willebrand factor-associated disorder, regulate extracellular matrix structuring, cellular adhesion, modulate cell adhesion in proliferation, modulate cellular interactions, modulate the proliferation, differentiation, and/or function of cells that appear in the bone marrow, and leukocytes, treat bone marrow, blood and hematopoietic associated diseases and disorders, atelectasis, plumonary conquesting interaction of cells as than and bronchiectasis, intestinal disorders, spleen associated diseases, modulate renal disorders, treat cardiovascular disorders such as includent to the proliferation, differentiation, and/or function of bone and cartilage cells and to treat bone and/or cartilage associated diseases or disorder. They may also be used to cartilage associated diseases or disorder. They may also be used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     4;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             treat disorders associated with the ovaries, and cerebral oedema, hydrocephalus, brain herniations, iatrogenic disease, inflammations, bacterial and viral meningitis, Alzheimer's Disease, cerebral toxoplasmosis, Parkinson's disease, multiple sclerosis, brain cancers, hydrocephalus and encephalitis, and treat hepatic disorders.

proliferation also describes TANGO 266, TANGO 261, TANGO 262, and TANGO 261, TANGO 262, and TANGO 261, TANGO 262, and TANGO 267. The TANGO polypeptides can be used to modulate cellular adhesion. The proteins can be used to treat any von Millebrand factor-associated disorder, regulate extracellular matrix structuring, cellular adhesion, and cell trafficking and/or migration, modulate cellular interactions, modulate cell adhesion in proliferation modulate disorders, such as cancer, modulate the proliferation, differentiation, and promoter cellular interactions, modulate the proliferation, differentiation, from marrow, and leukocytes, treat bone marrow, blood and hematopoietic associated diseases and disorders, atelectasis, pulmonary congestion or oedema, emphysema, chronic bronchists, bronchial asthma and bronchisctasis, intestinal disorders, spleen associated diseases, modulate the disorders spleen associated diseases, modulate the cardiovascular disorders such as ischemic heart disease, modulate the cardiovascular disorders such as ischemic heart disease, cardiovascular disorders be used to treat disorders associated with the ovaries, cerebral oedema, hydrocephalus, brain herniations, iatrogenic disease, inflammations, bacterial and viral meningitis, Alzheimer's brain cancers, hydrocephalus, and viral meningitis, and treat hepatic
                              The present sequence represents a murine TANGO 216 polypeptide. The

TANGO 266; TANGO 216;; TANGO 261; TANGO 262; TANGO 267; cellular proliferation; cellular differentiation; cellular adhesion;

A murine TANGO 216 polypeptide clone.

```
AAB18458-60 represent murine TANGO 216 proteins. The specification also describes TANGO 266, TANGO 261, TANGO 262, and TANGO 267. The TANGO 260 cellular differentiation and/or modulate cellular adhesion. The polypeptides can be used to endulate cellular adhesion. The proteins can be used to treat any von Wilebrand factor-associated disorder, regulate extracellular matrix structuring, cellular adhesion, and cell trafficking and/or migration, modulate cellular adhesion, modulate cell adhesion in proliferation, and/or function of cells modulate the proliferation, differentiation, and/or function of cells and hematopoietic associated diseases and disorders, atelectasis, and hematopoietic associated diseases and disorders, apleen associated diseases, modulate renal disorders, treat concittis, bronchial asthma and bronchiactasis, intestinal disorders, spleen associated diseases, modulate renal disorders, treat cardiovascular disorders such as ischemic heart disease, modulate the proliferation, differentiation, and/or function of bone and cartilage cells and to treat bone and/or cartilage associated diseases or disorder. They may also be used to treat disorders associated with the ovaries, and cerebral codema, hydrocephalus, brain hermiations, iatrogenic disease, inflammations, bacterial and viral meningitis, Alzheimer's Disease, inflammations, hydrocephalus and encephalitis, and treat hepatic disorders, it was concert, the present sequence does not appear in the specification; it was
                    hematopoletic associated disease, atelectasis; pulmonary congestion; ocedems; emphysema; chronic bronchitis; bronchial asthma; bronchies intestinal disorder; spleen associated disease; renal disorder; cardiovascular disorder; ischemic heart disease; hydrocephalus; brain herniation; iatrogenic disease; inflammation; meningitis; Alzheimer's Disease; cerebral toxplasmosis; parkinson's disease; multiple sclerosis; hydrocephalus; encephalitis; hepatic disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 60 NEIYYFVEQLAHKFISPQLRMSFIVFSTRGTTLMKLTEDREQIROGLEELQKVLPGGDTY 119

The specification also describes TANGO 266, TANGO 261, TANGO 262, and TANGO 267. The TANGO polypeptides can be used to modulate cellular proliferation, modulate cellular adhesion. The proteins can be used to treat any von Willebrand factor-associated disorder, regulate extracellular matrix structuring, cellular adhesion, and cell trafficking and/or migration, modulate cellular interactions, modulate cell adhesion in proliferation disorders, such as cancer, modulate the proliferation, differentiation, and/or function of cells

                                                                                                                                                                                                                                                                                                                                                          Nucleic acids encoding TANGO polypeptides are useful as modulating agents for regulating cellular processes like asthma, graft versus-host diseases, rheumatoid arthritis, psoriasis, inflammatory bowel disease, septic shock, ulcerative colitis, Crohn's disease, chronic myelogenous leukemia, cancer, liver disease, Hodgkin's disease, osteoarthritis, Lyme's disease, cachexia and autoimmune diseases, e.g. myasthemia gravis, autoimnune diabetes and systemic lupus erythematosus. The nucleic acids are also useful for producing transgenic animals and the TANGO polypeptides themselves. Partial Carnosic biology, for diagnostic assays, prognostic assays, pharmacogenomics and for monitoring clinical trials. TANGO polypeptides are suitable for both prophylactic and therapeutic methods for treating a subject at risk of a disorder or having a clistorder associated with aberrant TANGO expression. A wide range of cellular disorders can be treated.
                                                                                                                                                                                                                                                         Novel nucleic acid sequences encoding TANGO-128, 140, 197, 212, 213, 224 and 239 polypeptides useful for the treatment of asthma, rheumatoid arthritis, psoriasis and autoimmune diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     0; Gaps

SUBCELLULAR LOCATION: Type I membrane protein.

-!- SUBCELLULAR LOCATION: Type I membrane protein.

-!- TISSUE SPECIFICITY: EXPRESSED MODERATELY ON MYELOMONOCYTIC CELL.

-!- INES AND SUBSETS OF PERIPHERRAL BLOOD LEUKOCYTES AND STRONGLY ON TISSUE-SPECIALIZED CELLS, INCLUDING MACROPHAGES FOAM CELLS WITHIN TISSUE-SPECIALIZED CELLS, INCLUDING NACROPHAGES FOAM CELLS WITHIN THEROSCLEROTIC PLAQUES, AND ON SPLENIC RED PULP MACROPHAGES.

-!- DOMAIN: THE INTEGRIN !- DOMAIN (INSERT) IS A VWFA DOMAIN. INTEGRINS WITH !- DOMAINS TO THE INTEGRIN ALPHA CHAIN FAMILY.

-!- SIMILARITY: CONTAINS 1 VWFA DOMAIN.

-!- SIMILARITY: CONTAINS 1 VWFA DOMAIN.

-I-FUNCTION: INTEGRIN ALPHA-D/BETA-2 IS A RECEPTOR FOR ICAM3 AND VCAM1. MAY PLAY A ROLE IN THE ATHEROSCLEROTIC PROCESS SUCH AS VCAM1. MAY PLAY A ROLE IN THE ATHEROSCLEROTIC PROCESS SUCH AS VCAM1. MAY PLAY A ROLE IN THE ATHEROSCLEROTIC PROCESS SUCH AS USANING LIPOPROTEINS FROM PLAQUES AND IN PHAGOCYTOSIS OF BLOODERON MINE PLAYORS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         SUBUNIT: HETERODIMER OF AN ALPHA AND A BETA SUBUNIT. -!- FONCTION: INTEGRIN ALPHA M/BETA-2 IS IMPLICATED IN VARIOUS
ADHESIVE INTERACTIONS OF MONOCYTES, MACROPHAGES AND GRANULOCYTES
AS WELL AS IN MEDIATING THE UPTAKE OF COMPLEMENT-COATED PARTICLES.
IT IS IDENTICAL WITH CR-3, THE RECEPTOR FOR THE IC3B FRAGMENT OF
THE THIRD COMPLEMENT COMPONENT. IT PROBABLY RECOGNIZES THE R-G-D
PEPTIDE IN C3B. INTEGRIN ALPHA-M/BETA-2 IS ALSO A RECEPTOR FOR
FIBRINGEN, FACTOR X AND ICAM. IT RECOGNIZES PI AND P2 PEPTIDES
OF FIBRINGEN CAMPA CHAIN.
